

AUDIO LOUDNESS PROBLEMS?

AERO.QC Ingest Quality Controller
Fixes loudness problems in real time as you feed content into the server. Transparent and as automatic as desired, AERO.QC utilizes ITU BS.1770 and other methods to evaluate each content element and make adjustments with little or no operator intervention.

AERO.PRO Production Audio Maximizer
Breathes life and pumps power and control into your news audio and other locally produced content. Effortlessly combine studio content with pre-recorded spots, and live remote audio. Your local sound will finally have the gravity to pull in viewers and hold them captive!

AERO.AIR Transmission Loudness Manager
Smooths and blends network and local content by matching loudness and maintaining center channel compatibility by upmixing. Thanks to preceding stages of AERO tools, only the lightest touch is applied to network audio and only if necessary. Dolby encoding and decoding can be included to simplify setup, improve reliability and lower costs.

Inconsistent loudness between program segments, rough transitions and blaring commercials. These are the most common complaints from disappointed DTV viewers who are expecting so much more from digital television.

The new AERO suite of audio processing tools will put an end to these problems while at the same time improving the overall sound of your local and network content.

AERO processors are designed specifically for the unique needs of digital television audio - they are nothing like those old analog NTSC audio compressors. Each AERO device is an intelligent audio and data processing system capable of analyzing and applying the right tools at **each stage** to fix whatever problem arises.

So instead of that smashed, squashed, lifeless sound you had with analog, And instead of the annoying loudness assault of unprocessed digital, Now you have the tools to make your audio as amazing as your video.

The AERO suite of processing tools. Brought to you by Linear Acoustic - the first and only audio processing company specializing in DTV audio. Call us. We'll help you get your audio under control.
